

Lab #1

CS-2050

September 2, 2022

1 Requirements

In this lab, you will cover pass by reference and error codes. You must analyze the problem given, determine what error conditions you must test for, and make sure your code will not crash if an error condition is encountered.

Test code is provided that you may optionally use.

1.1 getMax

```
int getMax(int size, int *array, int *result);
```

Info: This function will take an integer array, an integer representing the size of the array, and a result pointer. This function will determine the maximum value in the array, and place the result in the result pointer. The function **must check** that the size is at least 1, and that the array pointer is not NULL. The function will return -1 on error, or 0 on success.

Notice

Grading:

1. Write required *getMax* function
* 5 points

Notice:

1. All of your lab submissions must compile under GCC using the *-Wall* and *-Werror* flags to be considered for a grade.
2. You are expected to provide proper documentation in every lab submission, in the form of code comments. For an example of proper lab documentation and a clear description of our expectations, see the lab policy document.
